WORK EXPERIENCE

Radiant Digital Pte. Ltd. — Founder & CEO Apr 2026 – Present
AI-powered SaaS company · Singapore

- Designed and shipped **Cadence**, a Generative + Agentic AI SaaS platform on the Claude API, deploying two autonomous agents (client-facing and owner) that handle enquiries, scheduling, reminders and payments — and **onboarded our first client onto the live platform**.
- Applied **prompt engineering and structured-output** techniques for reliable, production-grade agent responses; architected a secure multi-tenant backend (Supabase Row-Level Security) with Stripe / PayNow payment rails.
- Authored **solution narratives, a 12-phase product roadmap and go-to-market documentation**, taking the product from proof-of-concept to a live deployment with zero external funding.
- Conducted **desktop research** on GenAI / agentic-AI platforms, competitor positioning and data-protection requirements (Singapore PDPA) to steer product and regulatory decisions.

Radiant Academy (Education Agency) — Founder Aug 2025 – Present
Singapore

- Built a scalable digital infrastructure and led marketing across five social and search channels; managed a team of three maintaining 99%+ platform uptime.

Deloitte — Intern, AI PCOE Sep 2026 – Present
Singapore

- Work on **internal and external AI projects**, building and integrating AI solutions across Google Cloud Platform, AWS and locally hosted models.

Ministry of Education (MOE) — Teacher Jan 2024 – Aug 2024
Singapore

- Delivered classroom instruction within an MOE school, planning lessons and supporting students' academic development.

Singapore Armed Forces – 3rd Singapore Infantry Regiment — Lieutenant Jan 2022 – Dec 2023
Singapore

- Led a platoon of 30+ personnel — owning training, welfare and performance evaluation — and planned 5+ multi-day field exercises across sections, hitting readiness targets ahead of schedule.

ACADEMIC PROJECTS

Cardinality-Constrained Portfolio Optimisation — Heuristics & Systems Theory, SUTD

- Set out to build the highest risk-adjusted-return portfolio while holding at most 10 names — a real-world cardinality constraint that makes mean-variance optimisation NP-hard. Built an Ant Colony Optimization solver (Max–Min pheromone control + an exact inner QP weight step), benchmarked against Simulated Annealing, Tabu Search, a Genetic Algorithm and an exact MIQP solved to certified optimality in Gurobi. ACO matched the optimum and scaled best, yielding a portfolio with a **3.98 out-of-sample Sharpe ratio**, validated with Ledoit–Wolf covariance shrinkage and a walk-forward backtest.

RailWatch — Predictive Rail-Maintenance System — SBS Transit × SMRT

- Set out to predict when each rail track segment would need maintenance so upkeep could shift from fixed schedules to condition-based prioritisation. Co-built an on-premise web application that ingests rail-wear measurement data, forecasts when each track segment needs maintenance via **linear-regression modelling**, and ranks segments on a priority dashboard by maintenance urgency — FastAPI / SQLAlchemy back end with a React / Vite / Recharts front end for a Singapore rail operator.

EDUCATION

Singapore University of Technology and Design (SUTD) Aug 2024 – May 2028
Bachelor of Engineering Systems & Design (Financial Services)

- Recipient of the **SUTD Global Merit Scholarship** — full tuition, awarded on academic merit.
- Coursework spans applied AI & analytics, optimisation (MILP / metaheuristics), Bayesian statistical modelling and design-thinking methodology; specialising in AI applications within regulated financial-services contexts.

Victoria Junior College (VJC) — GCE A-Levels Jan 2020 – Dec 2021

- Captain of the **Cross Country and Track & Field** team, leading training and competition for the squad.
- Selected to represent VJC in meeting then-Minister for Education **Ong Ye Kung** (now Minister for Health of Singapore) during the COVID-19 period.

TECHNICAL SKILLS

Generative & Agentic AI: Claude API (prompt engineering, structured outputs, multi-agent orchestration), ChatGPT, ComfyUI / SDXL (LoRA, IP-Adapter FaceID)
Languages & Frameworks: TypeScript, JavaScript, Python, React, React Native, Next.js (App Router), FastAPI
Infrastructure & Data: Supabase (RLS, Edge Functions), Stripe, Vercel, Respond.io (WhatsApp BSP), Gurobi, scikit-learn, Pandas, Github
Research & Business: Desktop research & solution documentation, product roadmapping, pricing strategy, design thinking, SG company incorporation (BizFile+)
