Personal Profile

A passionate Computer Science and Design undergraduate seeks to build expertise in AI and further deepen knowledge in Security through hands-on academic and industry experience. Has a proactive mindset and a genuine eagerness to make a positive difference, thriving in collaborative and diverse team environments. Consistently seeks to deliver meaningful contributions while embracing every opportunity to learn, grow, and add value in both academic and professional settings.

Education

Bachelor of Engineering in Computer Science and Design, Honours — Singapore
Singapore University of Technology and Design (SUTD) — *Aug. 2024 – Present*

- Focus Track: Security
- Minor of Interest: Design and Artificial Intelligence
- Date of Graduation: Aug 2028

Diploma in Cybersecurity and Digital Forensics — Singapore
Temasek Polytechnic (TP) — *Apr. 2020 – May 2023*

- Elective Cluster: Digital Forensic (Mobile Digital Forensics and Malware Analysis)
- Modules Taken: Ethical Hacking and Intrusion Prevention, Secure Web Applications and Forensics in Digital Security

Experiences

AI/Data Intern — Aug 2026 – Dec 2026
Changi General Hospital (Singhealth) — *Singapore*

- Own AI/data pipeline for a clinical decision-support prototype, exploring adaptive item-selection (e.g. CAT) to predict the most informative next question and reduce respondent burden while preserving full domain coverage of a validated instrument
- Building and testing candidate models for adaptive question selection, integrating with the product's UX layer into an end-to-end prototype

IT Intern — May 2023 – June 2023
DataExpert Singapore Pte Ltd — *Singapore*

- Performed data recovery and digital forensics investigations, resolving technical issues with vendors and clients under time-sensitive conditions

Intern – Information Security and Digital Forensics — July 2022 – Dec. 2022
TRS Forensics Pte Ltd. — *Singapore*

- Advised clients on regulatory and cybersecurity compliance as part of the Data Protection Team
- Assessed client cybersecurity programs and supported live incident response and digital forensics investigations

Personal Projects

Cyber Risk Detection Tool | *Python* — June 2026 – July 2026

- Developing a tool to automate detection of common cyber risks using static and dynamic analysis techniques.
- Integrated CVE pattern matching and anomaly detection to flag potential vulnerabilities in target systems.

Web News Crawling and Retrieval Engine | *Python, Scrapy, Bash Script* — Mar. 2026 - April 2026

- Developed a Scrapy crawler to collect and export posts details from *news.ycombinator.com* within user-defined time range.
- Built an inverted index search engine with multi-keyword retrieval, cross-file de-duplication and BM25 relevance ranking across scraped datasets.
- Automated scraping and retrieval pipeline via a Bash script with interactive user prompts.

Technical Skills

Languages: Java, Python, SQL (Postgres), JavaScript, HTML/CSS, PHP
Developer Tools: Git, Bash Script, Visual Studio, PyCharm, Eclipse, Android Studio
Libraries: NumPy, Matplotlib, TensorFlow
Others: Digital Forensics, Malware Analysis, Reverse Engineering, Web-based Penetration Testing, Website and App Development
